

Terraform ka Dimag = Terraform State File! (.tfstate)

Pehle resource group banaya, fir storage account bn gaya...
lekin saath me nahi bn paya...

Koi bhi resource azure me banana hai toh resource group hona jaruri hai..

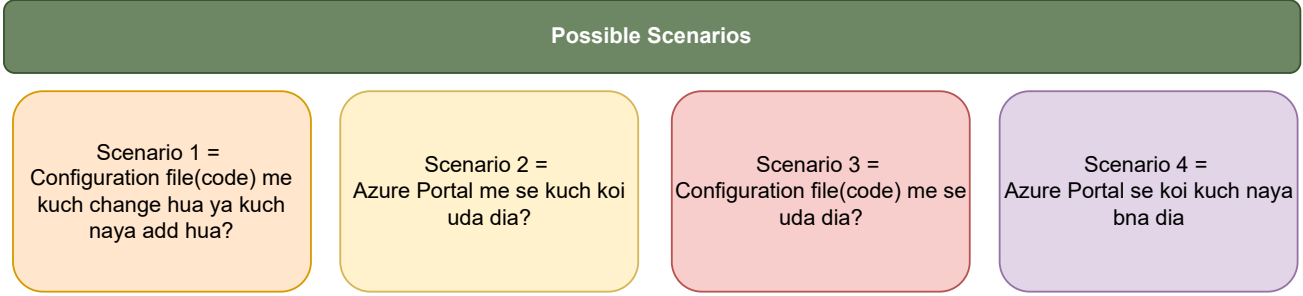

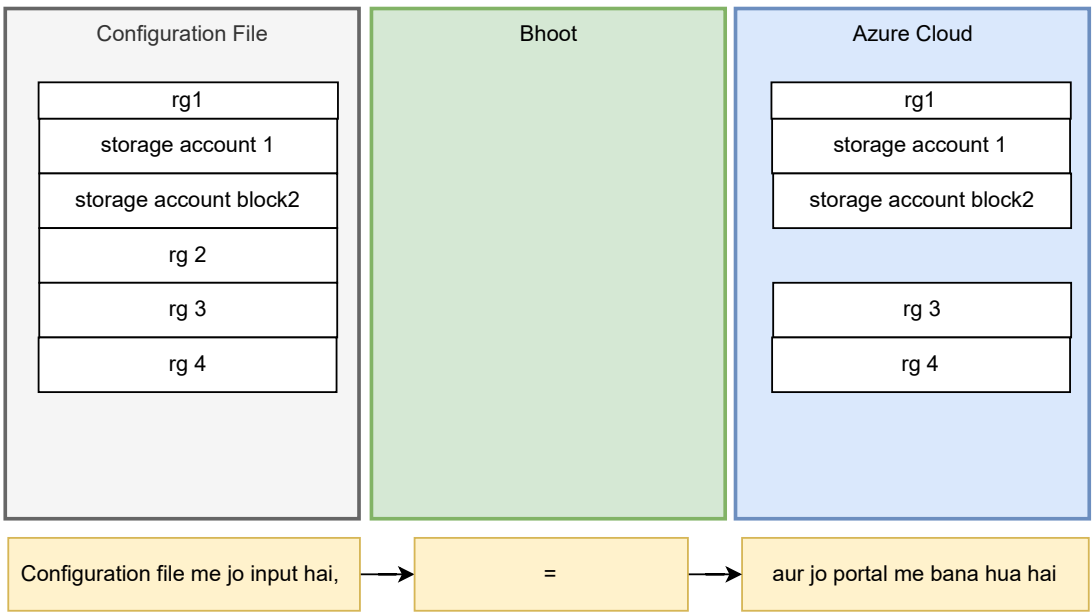

Terraform Kaam kaise karta hai?

```
resource "azurerm_storage_account" "stg" {
  name                = "nimbustorage"
  resource_group_name = azurerm_resource_group.santara.name
  location             = azurerm_resource_group.santara.location
  account_tier         = "Standard"
  account_replication_type = "GRS"
}
```

```
resource "azurerm_storage_account" "stg" {
  depends_on = [azurerm_resource_group.santara]
  name       = "nimbustorage"
  resource_group_name = "rg-nimbu"
  location     = "West Europe"
  account_tier = "Standard"
  account_replication_type = "GRS"
}
```

Jaise hi terraform apply chala, tb state fil banta hai...
